Streamline Dashboard – PRD

1. Overview

Streamline Dashboard provides role-based operational visibility into claim processing activity, financial volume, queue performance, productivity, and work activity.

The dashboard will provide different views based on the user's role:

- **User Dashboard** – Provides individual users with visibility into their own claim activity, work volume, notes, accounts, queues, and claim status.
- **Manager Dashboard** – Provides managers with team- and queue-level visibility into operational activity, workload, and individual user productivity.

All dashboard metrics must:

- Respect the logged-in user's authorized tenant/client scope.
- Respect role-based access permissions.
- Support date-range filtering.
- Use consistent date-range criteria across all metrics.
- Exclude records that are not eligible for dashboard reporting based on the applicable business rules.
- Return aggregated metrics efficiently for the initial dashboard load.

---

2. User Dashboard

2.1 Executive Summary

The User Dashboard provides users with visibility into their claim processing activity, financial workload, account and queue activity, claim status, and recent work.

The dashboard will provide an initial aggregated view containing the core operational metrics. Additional dashboard information may be loaded on demand to reduce the initial page-load time and improve the user experience.

The dashboard metrics will be filtered by the selected date range and restricted according to the user's authorized client/tenant scope

2.2 User Dashboard – Phase 1

The following metrics are included in the initial User Dashboard scope.

2.2.1 Claims Worked

Display the total number of claims worked by the logged-in user during the selected date range.

A claim is considered worked when it has qualifying work activity associated with the user during the selected period.

Display Type: Metric Card

2.2.2 Dollar Amount Worked

Display the total claim dollar amount associated with claims worked by the logged-in user during the selected date range.

Display Type: Metric Card

2.2.3 Notes Created

Display the number of notes created by the logged-in user during the selected date range.

The metric should represent the applicable note count based on the dashboard's note-counting business rules.

Display Type: Metric Card

2.2.4 Accounts(Encounter) Worked

Display the total number of unique accounts worked by the logged-in user during the selected date range.

If multiple claims belonging to the same account are worked during the selected period, the account should be counted only once.

Display Type: Metric Card

2.2.5 Queues Worked

Display the number of unique queues from which the logged-in user worked accounts during the selected date range.

Display Type: Metric Card

2.2.6 Pending vs. Completed Claims

Display the distribution of worked claims based on their applicable claim status.

The dashboard should display:

- **Pending**
- **Completed**

The calculation should respect the selected date range and the user's authorized scope.

Display Type: Pie/Donut Chart

2.2.7 Recent Activity – Last 10 Notes

Display the 10 most recently created notes/work activities.

The table may include:

Field	Description
Encounter Number	Associated encounter
Claim Number	Associated claim
Queue	Queue associated with the work

Amount	Claim dollar amount
Status	Current claim status
Last Action	Most recent action performed
Note	Note/activity information
Timestamp	Date and time of the activity

The section should be loaded on demand where applicable.

2.3 User Dashboard – Planned for Later

The following capabilities are identified for future dashboard phases and are not part of the initial User Dashboard implementation.

2.3.2 Daily Productivity Trend

Display the number of claims worked by the user for each day within the selected date range.

Display Type: Line/Bar Chart

2.3.3 Dollar Amount Trend

Display the total dollar amount worked by the user for each day within the selected date range.

Display Type: Line/Bar Chart

2.3.4 Follow-Up Due

Display the number of claims/accounts that have follow-up activity due or overdue.

The metric should distinguish between applicable upcoming and overdue follow-ups where required by the business.

2.3.5 Productivity vs. Target

Display the user's actual productivity compared with the configured daily productivity target.

The dashboard should provide visibility into:

- Actual claims worked
- Configured productivity target
- Percentage of target achieved

2.4 User Dashboard Date Range

The User Dashboard should provide date-range filtering.

Default Date Range

When the user does not specify a custom date range, the dashboard should use:

Last Calendar Week

- Start: Monday 00:00:00 UTC
- End: Sunday 23:59:59 UTC

Custom Date Range

Users should be able to select:

- `start_date`
- `end_date`

using the dashboard calendar/date-range selector.

When the date range changes, all applicable dashboard metrics should be recalculated using the selected period.

2.5 User Dashboard Scope and Security

Dashboard data must be restricted based on the logged-in user's role and authorized client/tenant scope.

The dashboard must not expose claims, accounts, queues, notes, or other activity outside the user's authorized scope.

For JTS users, the final dashboard behavior regarding client selection should be confirmed:

---

3. Manager Dashboard

3.1 Executive Summary

The Manager Dashboard provides managers with operational visibility into team and queue-level claim processing activity, financial workload, account activity, notes, claim status, and user productivity.

The dashboard enables managers to understand:

- Overall team work volume
- Queue-level workload
- Claims and accounts worked
- Financial value processed
- Pending and completed claims
- Individual user productivity

The dashboard should allow managers to move from an overall operational view into queue-level and user-level details.

All dashboard information must be restricted to queues and users within the logged-in manager's authorized scope.

---

4. Manager Dashboard – Phase 1

The following six metrics are included in the initial Manager Dashboard scope.

4.1 Claims Worked

Display the total number of claims worked by users within the manager's authorized scope during the selected date range.

For queue-level reporting, the metric should represent claims worked by users assigned to the respective queue.

Display Type: Metric Card / Queue-Level Metric

4.2 Dollar Amount Worked

Display the total dollar amount associated with claims worked by users within the manager's authorized scope during the selected date range.

The manager should be able to view the metric at the applicable queue and user levels.

Display Type: Metric Card / Queue-Level Metric

4.3 Notes Created

Display the total number of applicable notes created by users within the manager's authorized scope during the selected date range.

For queue-level reporting, notes should be associated with the applicable queue based on the work activity.

Display Type: Metric Card / Queue-Level Metric

4.4 Accounts Worked

Display the number of unique accounts worked within the manager's authorized scope during the selected date range.

For queue-level reporting, an account should be counted only once for a queue even when multiple claims belonging to the same account are worked.

Display Type: Metric Card / Queue-Level Metric

4.5 Pending vs. Completed Claims

Display the distribution of applicable claims based on their status:

- **Pending**
- **Completed**

The calculation should respect:

- Selected date range
- Manager's authorized scope
- Applicable queue/user scope

Display Type: Pie/Donut Chart

4.6 User Productivity

Provide a user-level productivity breakdown for users within the manager's authorized scope.

For each applicable user, display:

Metric	Description
User	User assigned within the manager's authorized scope
Claims Worked	Number of claims worked by the user

Productivity Target	Configured productivity target for the user
% of Target	User's productivity compared with the configured target
Dollar Amount Worked	Total dollar amount worked by the user
Notes Created	Number of applicable notes created by the user
Accounts Worked	Number of unique accounts worked by the user

The productivity information should support filtering by the selected queue where applicable.

---

5. Manager Dashboard – Queue-Level View

The Manager Dashboard should provide managers with a queue-level view of operational performance.

For each queue within the manager's authorized scope, the dashboard should provide the applicable Phase 1 metrics:

- Claims Worked
- Dollar Amount Worked
- Notes Created
- Accounts Worked
- Pending Claims
- Completed Claims
- User Productivity

The queue view allows the manager to understand operational activity at the queue level rather than relying only on overall team totals.

---

6. Manager Dashboard – User Productivity

The User Productivity section should allow the manager to view productivity for users associated with the selected queue.

When a manager selects a queue, the system should display the applicable users and their corresponding productivity metrics.

The manager should be able to review:

- Claims worked
- Productivity target
- Percentage of target achieved
- Dollar amount worked
- Notes created
- Accounts worked

The displayed users must be restricted to users within the manager's authorized scope.

---

7. Manager Dashboard – Planned for Later

The following capabilities are identified as future enhancements and are excluded from the initial Manager Dashboard scope.

7.1 Productivity Trend

Display team productivity by day for the selected date range.

Display Type: Line/Bar Chart

7.2 Queue Performance

Provide an expanded queue-performance view containing additional queue-level operational metrics and comparisons.

Potential metrics include:

- Claims Worked
- Accounts Worked
- Pending Claims
- Completed Claims

This capability may extend the Phase 1 queue-level metrics with additional visualization and analysis.

7.3 Follow-Up Risk

Display upcoming and overdue follow-up activity.

The information may be broken down by:

- Queue
- User
- Follow-up status

7.4 User Activity Trend

Display daily activity for each applicable assigned user during the selected date range.

Display Type: Line/Bar Chart

7.5 Top Workload Areas

Identify queues and/or accounts generating the highest claim volume within the selected date range.

This capability is intended to help managers identify areas with significant work volume.

7.6 Recently Worked Claims

Provide a detailed activity table containing recently worked claims.

Potential fields include:

Field	Description
User	User who worked the claim
Queue	Queue associated with the claim
Claim	Claim identifier
Amount	Claim dollar amount
Status	Current claim status
Worked Date	Date/time the claim was worked

Last Action	Most recent applicable action

---

8. Date Range – Manager Dashboard

The Manager Dashboard should provide a date-range selector.

The selected date range must be consistently applied to all applicable metrics.

When the manager changes the date range:

1. Dashboard metrics should be recalculated.
2. Queue-level metrics should reflect the selected period.
3. User productivity metrics should reflect the selected period.
4. Charts and tables included in the applicable scope should refresh accordingly.

The default date-range behavior should follow the dashboard standard defined for the product.

---

9. Role-Based Access and Data Scope

Dashboard data must be restricted according to the logged-in user's role and authorization.

User Dashboard

A user should only be able to view data permitted by the user's client/tenant and role.

Manager Dashboard

A manager should only be able to view:

- Authorized queues
- Users associated with those queues
- Claims within the authorized scope
- Accounts within the authorized scope
- Applicable work activity and notes

A user must not be able to access dashboard data outside their authorized scope by manipulating request parameters, queue identifiers, client identifiers, or date-range values.

11. Dashboard Scope Summary

Role	Phase 1 / Planned	Planned for Later
User	Claims Worked	Recent Activity – Last 10 Notes
	Dollar Amount Worked	Daily Productivity Trend
	Notes Created	Dollar Amount Trend
	Accounts Worked	Follow-Up Due
	Queues Worked	Productivity vs. Target
	Pending vs. Completed Claims	—
Manager	Claims Worked	Productivity Trend
	Dollar Amount Worked	Queue Performance – Extended View
	Notes Created	Follow-Up Risk

Accounts Worked	User Activity Trend
Pending vs. Completed Claims	Top Workload Areas
User Productivity	Recently Worked Claims
